

On-street parking sensors

On-street parking sensors

During 2016 and 2017, about 1,500 smart parking sensors were installed in the area of Vračar municipality, which belongs to zone parking system.

Through 60 info boards, which are located at intersections of the streets, the parking sensor system provides accurate information on available parking spaces, and in that manner reduces the time spent in looking for a parking.

In order to provide valid data for a parking sensor system, drivers must properly park their vehicles at a precisely marked parking space, above the sensor itself.

Parking sensors are installed in the following streets:

Alekse Nenadovića whole street	Baba Višnjina whole street
Braće Nedića whole street	Hadži Đerina from Golsvordijeve to Patrijarha Gavrila

Hadži Prodanova whole street	Kičevska od Golsvordijeve do Kneginje Zorke
